Docket No.: PF-0040 US

12. (Once Amended) An isolated polynucleotide comprising a polynucleotide sequence encoding the amino acid sequence of SEQ ID NO:2.

B

13. (Once Amended) An isolated polynucleotide comprising the polynucleotide sequence of SEQ ID NO:1.

- 14. (Once Amended) An isolated polynucleotide fully complementary to a polynucleotide comprising the polynucleotide sequence of SEQ ID NO:1.
- 15. (Once Amended) An expression vector comprising the isolated polynucleotide of claim 12.
  - 16. A host cell comprising the expression vector of claim 15.

22

- 17. (Once Amended) A method for producing a polypeptide comprising the amino acid sequence of SEQ ID NO:2, said method comprising the steps of:
- (a) culturing the host cell of claim 16 under conditions suitable for expression of the polypeptide, and
  - (b) recovering said polypeptide from the cell culture.
- 18. An isolated polynucleotide fully complementary to a polynucleotide comprising a polynucleotide sequence encoding the amino acid sequence of SEQ ID NO:2.

β<sup>3</sup>

- 19. A method of detecting a target polynucleotide in a sample, said target polynucleotide having a sequence of a polynucleotide of claim 13, the method comprising:
- a) hybridizing the sample with a probe comprising at least 20 contiguous nucleotides comprising a sequence complementary to said target polynucleotide in the sample, and which probe specifically hybridizes to said target polynucleotide, under conditions whereby a hybridization complex is formed between said probe and

Docket No.: PF-0040 US

said target polynucleotide or fragments thereof, and

- b) detecting the presence or absence of said hybridization complex, and, optionally, if present, the amount thereof.
- 20. A method of claim 19, wherein the probe comprises at least 60 contiguous nucleotides.
- 21. A method of detecting a target polynucleotide in a sample, said target polynucleotide having a sequence of a polynucleotide of claim 13, the method comprising:
  - amplifying said target polynucleotide or fragment thereof using polymerase chain a) reaction amplification, and
  - b) detecting the presence or absence of said amplified target polynucleotide or fragment thereof, and, optionally, if present, the amount thereof.
- 22. A method of screening a compound for effectiveness in altering expression of a target polynucleotide, wherein said target polynucleotide comprises a sequence of claim 13, the method comprising:
  - a) exposing a sample comprising the target polynucleotide to a compound, under conditions suitable for the expression of the target polynucleotide,
  - b) detecting altered expression of the target polynucleotide, and
  - c) comparing the expression of the target polynucleotide in the presence of varying amounts of the compound and in the absence of the compound.
